Feasibility study of the ability of ERG components to distinguish schizophrenia and bipolar disorder type I.

Version 2: Februrary 26, 2018

Volunteers Wanted

Dr. Steven Silverstein is looking for volunteers for a research study at Rutgers UBHC in Piscataway.

This is an evaluation study of the back of the eye, or retina, to flashes of light using a test called an electroretinogram (ERG). No medication or intervention is involved.

- People within the age range of 18-50 and a diagnosis of Schizophrenia or Bipolar I Disorder may be eligible.
- The study involves 4 appointments each about 1-2 hours, including the use of interviews and ERG testing.
- Participants will be compensated at $20/hour for each appointment; transportation costs are paid for by the study.

For more information, or to see if you qualify, please call Nancy Tiffany at (732) 235-4592
